[EPUB] Ades Pupil Manual Guide

Adie tonic pupil, also known as Adie's Syndrome or Holmes-Adie Syndrome, is a disorder in which there is parasympathetic denervation of the afflicted pupil resulting in a poor light but better and tonic near constriction.

Adie's Pupil - EyeWiki

Adie syndrome is characterized by one eye with a pupil that is larger than normal that constricts slowly in bright light (tonic pupil), along with the absence of deep tendon reflexes, usually in the Achilles tendon. It typically begins gradually in one eye, and often progresses to involve the other eye. At first, it may only cause the loss of deep tendon reflexes on one side of the body, but then progress to the other side.

Adie syndrome | Genetic and Rare Diseases Information ...

Adie tonic pupil Go to Academy Store Learn more and Purchase. Diagnostic features of tonic pupils include sluggish, segmental pupillary responses to light and better response to near effort followed by slow redilation. A tonic pupil is caused by postganglionic parasympathetic pupillomotor damage.
