Harry Quon, Louis B. Harrison, in Encyclopedia of Cancer (Second Edition), 2002. II.H.2 Cervix. Brachytherapy has an established role in the management of both early stage and advanced stage cervix carcinomas. The greatest clinical experience has been with LDR temporary intracavitary cesium-137 implants with both manual and remote afterloading techniques reported.

Brachytherapy - an overview | ScienceDirect Topics

LDR brachytherapy is commonly used to treat low risk prostate cancer. Tiny radioactive seeds, about the size of a grain of rice, are permanently placed inside the tumor. 1 The seeds give out low levels of radiation for a few months, killing the cancer cells. LDR brachytherapy is a very effective treatment for prostate cancer.

About Brachytherapy: Brachytherapy treatment

A number of techniques are used for inserting the brachytherapy devices into body tissue. Your radiation therapy team may use needles or special applicators. These long, hollow tubes are loaded with the brachytherapy devices, such as seeds, and inserted into the tissue where the seeds are released.

Brachytherapy - Uses, Procedure, Brachytherapy Side Effects

HDR brachytherapy is more commonly used to treat cervical cancer than LDR brachytherapy as it is often more convenient for patients. Pulsed dose rate (PDR) brachytherapy is a cross between LDR and HDR brachytherapy. It provides short pulses of radiation to the cancer using a source that gives out a high level of radiation.
