All you need to configure is the server name, your username and your password, everything else can be left at its default setting. You must, however, use explicit server names (or IPs) as described on this page, the functional names (\*.pptp.your-freedom.net) will not work due to a weirdness in the way iOS sets up PPTP connections.

The Your Freedom services makes accessible what is unaccessible to you, and it hides your network address from those who don't need to know. Just download our client application and install or just run it on your PC; it turns your own PC into an uncensored, anonymous web proxy and an uncensored, anonymous SOCKS proxy that your applications can use, and if that's not enough it can even get you connected to the Internet just as if you were using an unrestricted DSL or cable connection -- just ...
